Reading Assignment 1 Questions

3.1. World Wide Web General

1. What are the most essential technologies that made the World Wide Web such a success?

The three essential technologies are HTML, HTTP and URLs.

2. How are resources (html pages, images, etc) addressed on the web?

They are addressed using URLs.

3. What are the general components of a url?

A URL can contain the scheme/protocol, host, port, path, query, and fragment.

3.2. Web Server

1. What is a web server?

A web server is software that receives requests from clients and sends web content back to them.

2. What does a web server do?

It receives HTTP requests and sends the requested resources, such as HTML pages, images or videos.

3. How can content be stored on a web server?

Content can be stored as files (static content) or generated when it is requested (dynamic content).

4. How is content in webpages described?

It is described using HTML.

3.3. Web Client

1. What is a web client?

A web client is a program that requests resources from a web server.

2. What does a web client do?

It sends requests to web servers and receives and displays the requested content.

3. Are Web Client and Web Browser the same?

Not exactly. A web browser is a type of web client, but other programs can also act as web clients.

3.4. HTTP

1. Which steps happen between entering a url and seeing the page?

The browser sends a request to the server, the server sends a response, and the browser downloads and displays the resources of the page.

2. What is an HTTP request, what is an HTTP response?

An HTTP request is a message sent by the client to the server. An HTTP response is the message sent back by the server.

3. What is a status code? What do 200 and 404 mean?

A status code tells the client what happened with the request. 200 means OK/successful, and 404 means the requested resource was not found.

4. Which resources does the browser request additionally after it has received the html page?

It can request CSS files, JavaScript files, images, videos, and other resources.

3.5. Static and Dynamic Web Pages

1. What is the difference between a static and a dynamically generated web page?

A static page is delivered as it is stored. A dynamic page is generated or changed when it is requested.
